Project: Revamping of Bridge "First Ellerholz ramp"

Period: January - December 2001

Contract Volume: approx. 620,000 DEM approx. 317,000 €

Construction Cost: approx. 15 Mio. DEM approx. 7,669,000 €

Client: Freie und Hansestadt Hamburg
Strom- und Hafengebäude, Hafengebäudeabteilung

Short Description: Demolition of an existing prestressed concrete bridge (approx. 241m) and the construction of a new connecting bridge under difficult conditions, including the existing traffic in the area of the crossing harbour train (5 Platform), two sluice and the public traffic as well as the proximity to the existing construction. The bridge is a part of the main traffic way through the harbour and therefore must be completed in the shortest possible time.

IMS will perform the task of "site supervision" in the area of:

- Project guidance (together with Strom- und Hafengebäude)
- Construction management (together with Strom- und Hafengebäude)
- Local site supervision
- Safety and health protection co-ordination
